Techniblinds Disposable Medical Curtains

The Techniblinds disposable curtain system enables hospitals to balance time and cost against hygiene issues.

With infection control being one of the most crucial aspects of the hospital environment, Techniblinds Disposable Medical Curtains can play an important role in hospital infection control strategy.

The benefits of the Techniblinds Disposable Medical Curtain system:

Highly effective infection control

Smart appearance

Cost effective

Easy to fit and replace

Easy to monitor

2 sizes means less waste

Environmentally friendly

Fire retardant BS 5867 Part 2 Type C

Fighting back against hospital acquired infections

Disposable curtains have been proven to be a vital tool in the battle against hospital acquired infections. When hospitals have introduced disposable curtains on their wards, alongside other infection control measures, they have seen significant reductions in infection rates.

Techniblinds Disposable Medical Curtains are economical and easy to fit and change. This means they can be replaced frequently, which is key to their effectiveness in infection control.

Each disposable curtain is supplied in its own protective sleeve with either an eyelet top or peg top fitting. The curtain can be hung directly onto the track system without it having to be laid across a work surface or on the floor. Once attached, the protective sleeve can then be removed, avoiding any possible contamination from the surrounding area.

The use of fabric curtains in hospitals has been scientifically linked to the source of 'comparatively high counts of organisms'.

Anti-bacterial

Techniblinds Disposable Medical Curtains are manufactured from 100% polypropylene; an inert material upon which infectious organisms struggle to survive.

To aid the prevention of infection, each curtain is treated with an anti-bacterial formulation which has been tested against a full range of dangerous bacteria and is effective against MRSA.

The anti-microbial treatment of Techniblinds Medical Curtains makes them extremely effective against bacterial activity in and around the curtain material. Test results are available on request.

Techniblinds Disposable Medical Curtains are resistant to the following organisms:

- Aspergillus niger
- Escherichia coli
- Enterococcus faecalis
- Pseudomonas aeruginosa
- Clostridium difficile
- Methicillin-resistant Staphylococcus aureus (MRSA)

For all types of track system, ready to hang

For quick and easy replacement, Techniblinds Medical Curtains are supplied with the hanging system already fitted and are available in the standard styles: Eyelet Top and Peg Top. When ordering, simply state your preferred style.

One size fits all

Techniblinds Medical Curtains fit most hospital cubicle rails that have been installed at the standard fixing height and width.

Easy-to-monitor curtain change intervals with customised labelling system

To ensure they are changed regularly, each Techniblinds Medical Curtain features a label to be completed by staff. This allows hospitals to monitor curtain change intervals and self-audit the curtain change policy for each individual department. The curtain label and box label can be customised to suit individual company needs.

Ease of use, fast to replace

Unlike conventional fabric curtains, Techniblinds Disposable Medical Curtains can be replaced in a matter of minutes. The lightweight curtains are supplied in boxes of 5 and are easy to carry and store within a hospital ward. New curtains are then close at hand for when staff need to fit a replacement.

Clean and smart appearance

Supplied pre-pleated, Techniblinds Disposable Medical Curtains look neat and tidy and will smarten up a hospital ward usually fitted with conventional curtains. When not in use, just stow the curtains away compactly against the wall, giving patients and staff more light and generally improving the hospital environment.

Flame retardant

Techniblinds Disposable Medical Curtains comply with the fire retardancy standard BS 5867 Part 2 Type C.

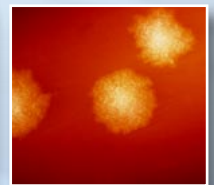

Gentle on the environment

Our curtains are fashioned in lightweight polypropylene which has one of the lowest environmental impacts of any material, man-made or natural.

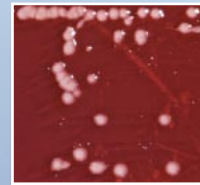

Curtains are resistant to a full range of dangerous bacteria

Enterococcus faecalis

Clostridium difficile

Pseudomonas aeruginosa

Escherichia coli

Available in all standard hanging system styles

Quick and easy replacement

Customised labelling system

Techniblinds Disposable Medical Curtains SPECIFICATIONS
